

ONEPOINT

Dialysis Cannula

OnePoint Dialysis Cannula
is designed to reduce the patient
burden of cannulation

Dialysis Cannulation Affects Patients

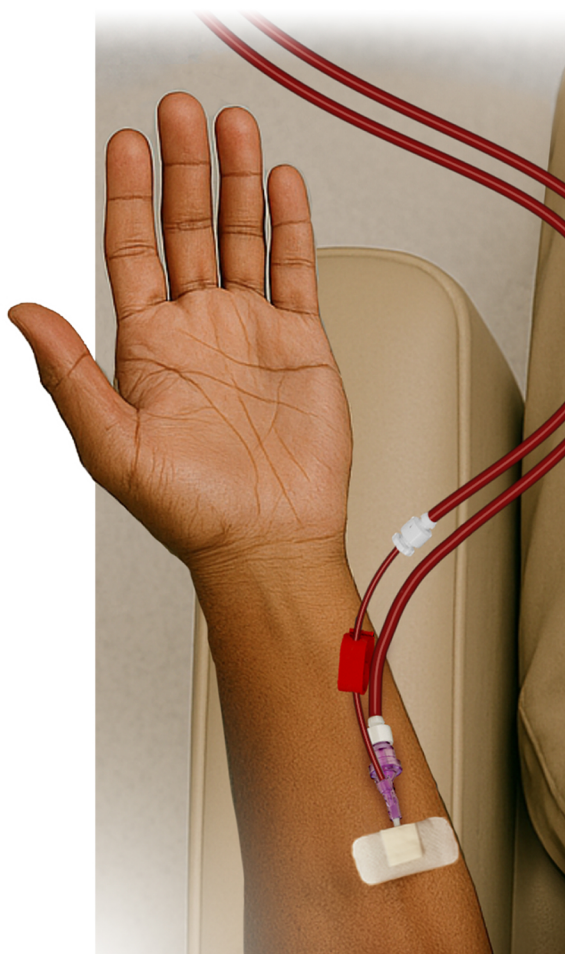

Large steel needles can cause pain
and endothelial injury

Cannulation is a Leading Reason Why Dialysis Patients Are Not Satisfied

"It's the feeling of fear, not really the pain... more that
something would go wrong. The fistula would break."¹

— Anonymous Dialysis Patient

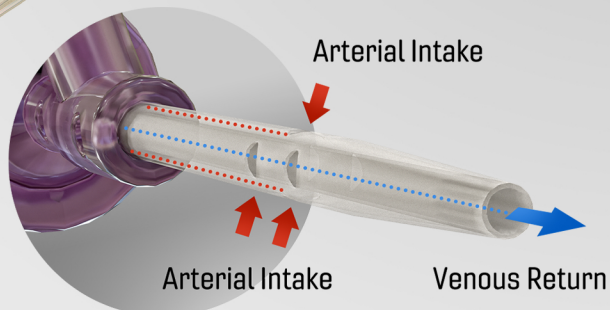

All dialysis patients require better
cannulation experience, including agitated,
older patients and those who cannot tolerate
immobilization

ONEPOINT

Dialysis Cannula

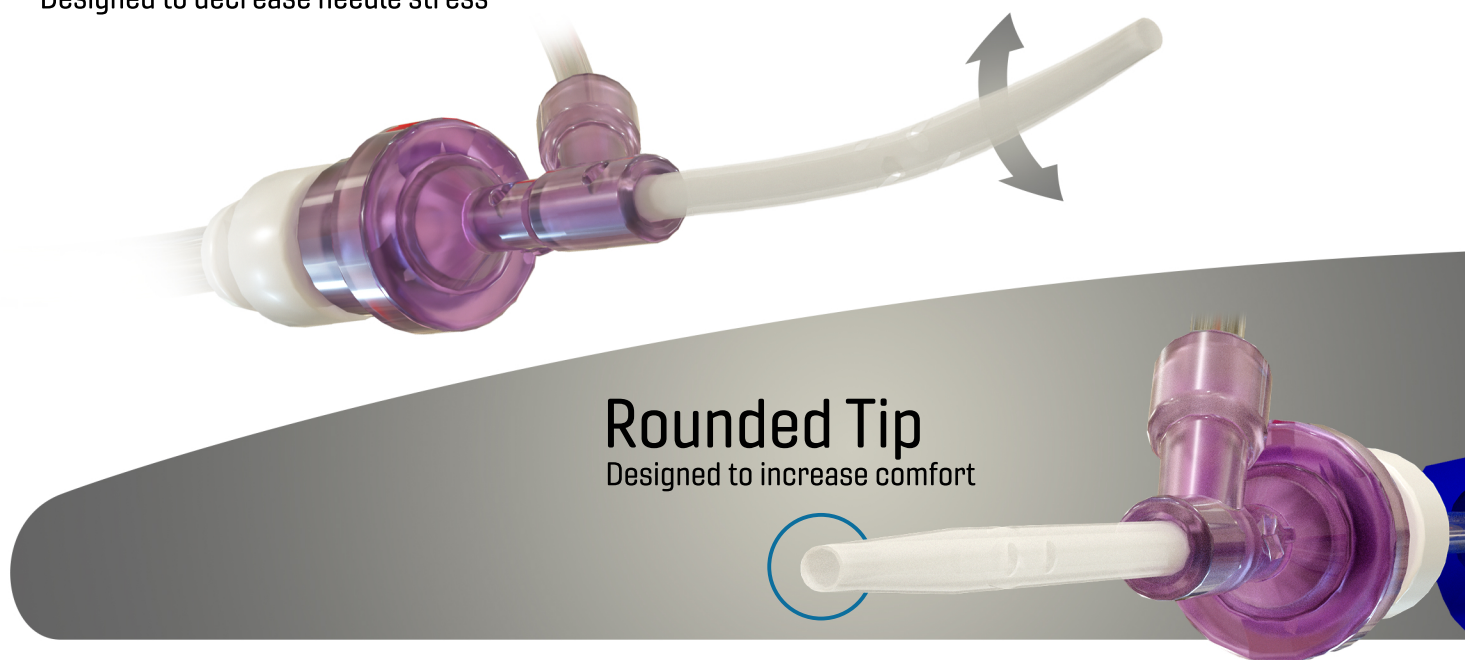

OnePoint Designed to Improve Cannulation for Patients and Providers

- Single puncture, dual-lumen, flexible polymer cannula
- May increase patient comfort, improve arm flexibility, offer fewer complications
- May offer safer tortuous fistula access, increasing potential cannulation sites
- May lower overall cost by fewer complications resulting in less interventions due to failed access

Flexible Polymer Cannula

Designed to decrease needle stress

Rounded Tip
Designed to increase comfort
